Identify and roles of the members of the group, reasons for the conformation of the group

Who we are

Katsu enterprise is a business dedicated to create data management software.

It is formed by three members: the Coordinator, Sub-coordinator and the Developer member.

Working together was the best option to make Katsu enterprise work efficiently as a result of our own skills and personality.Thus, we decided on the roles as a team after a meeting. The organization is formed by the coordinator Fiorella Macedo, who was chosen to be the Coordinator due to her ability to make everyone motivated. Oriana Dávila is the sub-coordinator and Lautaro Perez is the Developer member, given his skills with informatic knowledge.

How we work

We follow a few rules that make us work efficiently. We start making small software for small businesses like shops, small libraries, etc.

We help each other to do our job more efficiently and faster, making all of us feel comfortable and always taking care of each other.

Nevertheless, it is important to remember the fact that we have permanent link contact with our clients to make sure that we are doing what they want correctly.

Mission and vision

Our mission is to develop specific software and create it as simply as we can.

We plan to make work easier and faster for you.

Considerations in the design of the system

Our system will be used to manage data and save it for a long time, and also it will detect any discrepancy in the rules and notificate to the administrator.

Developing a user friendly program is the best for non-experienced clients in the informatic area, judges are going to send a score to the database and that score will be shown on a screen in front of the stage.

Objectives and success criteria

The objective our enterprise is looking for is having client satisfaction. If clients like our jobs, they will be satisfied and we can serve them again.

We want to develop software for important businesses and expand ours, giving our clients what they want and making sure they are satisfied and happy with our job, providing our clients the software that they need to work, creating those tools for them.

To do a successful job we need to be a good team. Help us to resolve troubles and problems.

This application needs a lot of minimum requirements and those are our success criteria, guaranteeing our client that their needs will be ensured, in this project we must do a system that can save the score on the judges tape.

Limitations and Requirements

Obviously our methods have some limitations that we will describe below.

Firstly, if there is not enough time to do the Karate project efficiently, we will work on being more organized and constant.

The limited number of employees is also a limitation, because there are only three of us when we are supposed to be four, this will no longer be a problem if we work double.

The division of the work is an important thing to do before starting to develop software correctly , because we need to be efficient, and for that reason we use a process whereby a team can manage a project by dividing the work in multiple areas. Once each team member has completed their tasks, we all have a meeting to discuss and correct possible failures.
